

What is OPAS Lite?

OPAS Lite has a simple, clean design allowing users to view and interact with schedules on mobile phones, tablets, Macs and PCs. OPAS Lite has two components: **(1) Desktop View** and **(2) Mobile View**. Desktop view allows for increased supervisory functionality while the Mobile view enables users on mobile devices to access and interact with their personal schedule.

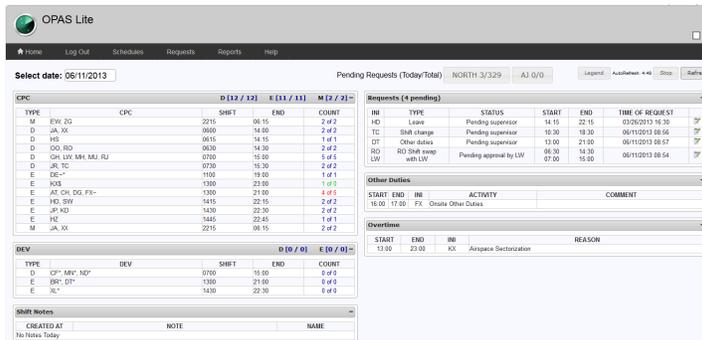

What's New?

OPAS Lite Desktop view is optimized for browsers on Macs and PCs. It provides a new, streamlined avenue to view and manage daily schedules, with such features as: Kiosk Mode (view only) and SUP/CIC functionality for approving and denying requests. Based on the device you are accessing OPAS Lite from, you will be redirected to either the Desktop or Mobile view.
